FOR IMMEDIATE RELEASE

**SDI's Last C-MIGITS Unit Ships,
Making Way for the SDN500 Next Generation INS/GPS Solution**

Concord, CA – March 12, 2012 - Systron Donner Inertial (SDI), a business unit of Custom Sensors & Technologies (CST), announced the shipment of the final C-MIGITS INS/GPS system built, marking the official production end for one of the premier INS/GPS systems in its class.

Since its introduction in 2001, approximately 1,500 C-MIGITS units have been deployed around the world in various military and aerospace applications. Providing a Quartz MEMS IMU tightly-coupled with a GPS receiver via a proprietary Kalman filter, the C-MIGITS has provided navigation, geo-location and optical/antenna stabilization for many highly-sophisticated systems.

In mid-2011, Systron Donner Inertial introduced the SDN500 INS/GPS system as the successor to the C-MIGITS to address components obsolescence issues. Utilizing the latest SDI500 Quartz MEMS IMU, a tactical-grade system proven across many platforms, the SDN500 combines dramatically-improved inertial performance with the familiar C-MIGITS communications and command interface. Additionally, the SDN500 is 50% smaller, weighs 33% less and draws 46% less power. Full backward-compatibility is available to continue to serve legacy applications with quick re-qualification cycles. New applications benefit from an expanded command set, support for tightly-coupled magnetometer inputs and highly-superior inertial performance in the event of GPS jamming, signal degradation or outage. In sum, the SDN500 offers a compelling combination of performance, size, weight and cost.

For further information and specifications on the SDN500, find the product data sheet at this link: www.systron.com/products/sdn500, or for information on the complete SDI product line, E-mail: sales@systron.com; or visit us on the Web: www.systron.com.

About Systron Donner Inertial:

Systron Donner Inertial (SDI) is the world's leading supplier of Quartz MEMS Inertial Sensing Products and Systems providing precision systems solutions to aerospace, military and commercial aircraft, marine and land vehicular applications. Our products and systems are ideally suited for use by Integrators and OEMs. SDI is a pioneer in the development of Quartz MEMS technology utilizing tuning-fork designs. SDI is continuously developing leading-edge technologies applied to innovative, breakthrough products which are enabling advanced performance in critical military and commercial Guidance, Navigation and Control (GN&C) applications worldwide.

Our experience is built on over half a century of market and technological leadership in supplying our innovative angular rate sensors, linear accelerometers, inertial measurement unit and INS/GPS designs to these markets, contributing to both overall performance and establishing standards for excellent price/performance characteristics. Systron Donner Inertial is brand of Custom Sensors & Technologies (CST), headquartered in Moorpark, California

About Custom Sensors & Technologies:

Custom Sensors & Technologies (CST) is a specialist in sensing, control and motion products. Through its brands, BEI Kimco, BEI Sensors, BEI PSSC, Crouzet, Crydom, Kavlico, Newall and Systron Donner Inertial, CST offers customizable, reliable and efficient components for mission-critical systems in Aerospace & Defence, Transportation, Energy & Infrastructures, Commercial & Industrial OEMs, Medical, Food and Beverage and Building Management markets.

Focused on premium value offers and committed to excellence, CST, with more than 4700 employees worldwide and sales of \$660M US in 2011, is the dependable and adaptable partner for the most demanding customers. For more information, visit www.cstsensors.com
